Art Unit: 3672

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2202 and 2241 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 2193 and 2232 require the heating rate to be "less than about 10C per day", while claims 2202 and 2241, which depend from these claims, calls for a heating rate of "about 10oC/day". Accordingly, claims 2202 and 2241 are both indefinite and comprise improper dependent claims in calling for a heating rate outside the range of their parent claim. In this regard, a dependent claim must include all the features of the parent claim, and then specify an additional limitation.

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 2232-2239, 2242-2269, 5397 and 5401-5403 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1785-1821 of copending Application No. 10/128,702. Although the conflicting claims

Art Unit: 3672

are not identical, they are not patentably distinct from each other because the hydrocarbon containing formation treated by the method of, e.g., claim 2232 of this pending application is deemed broad enough to encompass the relatively low permeability formation containing heavy hydrocarbons of claims 1785 and 1793 of the copending application, which claim 1793 of the '702 application includes the additional limitation in herein pending claim 2232 of providing an average heating rate of less than about 1oC in a pyrolysis temperature range. It is further noted that the additional pyrolysis temperature range of about 270oC to about 400oC recited in the '702 claim 1793 is also recited in pending claim 2234. Otherwise, the remaining claims of both this and the copending application appear to correspond.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

5. Claims 2193-2200, 2202-2231, 5396 and 5398-5400 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 2205-2244 of copending Application No. 10/128,699. Although the conflicting claims are not identical, they are not patentably distinct from each other because the hydrocarbon containing formation treated by the method of claim 2193 of this pending application is deemed broad enough to encompass the oil shale formation of claims 2205 and 2213 of the copending application, which claim 2213 of the '702 application includes the additional limitation in herein pending claim 2193 of providing an average heating rate of less than about 1oC in a pyrolysis temperature range. It is further noted that the additional pyrolysis temperature range of about 270oC to about 400oC recited in the '702 claim 2213 is also recited in pending claim 2195. Otherwise, the remaining claims of both this and the copending application appear to correspond.

Art Unit: 3672

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

6. Claims 5404, 5405 and 5407-5410 are allowed.
